

## Collocation

**Facilities & services to keep your servers online and secure**

Caribe.Net Collocation services enables corporations to house business-critical servers off-site for superior security, bandwidth management and connections. You can now locate your Internet servers in Caribe.Net's hardened & secure Data Center, with its redundant connection to the Internet backbone and strategically located in Puerto Rico – a US Commonwealth under U.S. federal jurisdiction.

### Strategic Location

Caribe.Net's Data Center is located in the El Telegrafo building in San Juan, Puerto Rico. The El Telegrafo building is the home to the island's first telegraph, and served for years as a key telecommunications building for the local telephone company. Its recent renovation, coupled with its original telco-quality construction and facilities, made it an ideal location for an Internet Data Center.

For companies looking to host their equipment within the United States, but yet in a safer location than the mainland, Puerto Rico presents itself as an excellent opportunity – just two hours from Miami, Florida.

### Superior Connectivity

Caribe.Net's Data Center enjoys redundant connections to the Internet via its own fiberoptic submarine cables. Our network connects directly to the Internet backbone via both public and private peering arrangements, to optimize performance for our clients.

### Sensible Pricing

Caribe.Net's Collocation services offers predictable, fixed costs based on two simple factors – the amount of physical computer rack space needed and the bandwidth required. Your Caribe.Net Account Executive will work with you to accurately identify your needs.

### Data Center Management and Monitoring

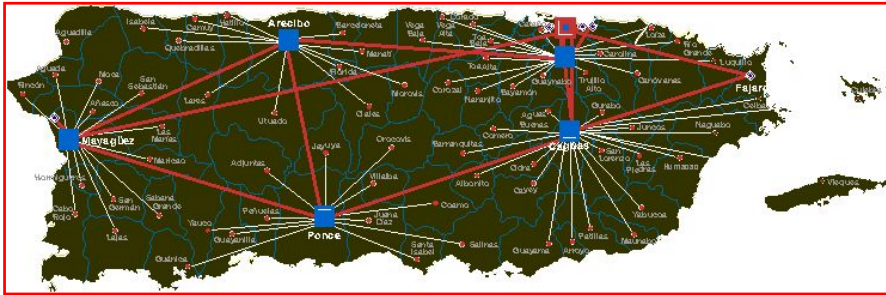

Caribe.Net Collocation provides you with the most reliable Internet access available for your business-critical servers. Caribe.Net utilizes various monitoring & management tools, including SNMP – the standard Internet monitoring protocol. Caribe.Net has implemented SNMP to constantly monitor every aspect of our network, allowing us to quickly and precisely pinpoint problems in the network and fix them as soon as possible.

### Why Should I Collocate in Caribe.Net's Data Center?

- **Better Bandwidth Management.** With your servers located off-site, you can devote all of your resources to your company email, file transfer, networked applications and other Internet needs.
- **Improved Security.** Your servers will be housed in a hardened, telco-quality hosting center to ensure physical safety as well as protection against unauthorized access to your equipment.
- **Performance and Reliability.** Your traffic will move through the fastest routes, and your equipment will be supported by the optimized environment for electronic equipment options in Caribe.Net's Data Center.

*Servers collocated in the Caribe.Net Data Center enjoy their own direct entrance to our high-performance network and the Internet beyond. Your server is connect to Caribe.Net's MegaPOP in San Juan, PR.*

### **Hardened Telco-Grade Data Facilities**

Caribe.Net's Data Center is connected to the electric grid power network via primary lines – the same lines which connect vital services such as hospitals and police stations. In addition, the Data Center also features an uninterruptable power supply and a diesel generator that can keep our data center operating to full capacity indefinitely without direct electric grid power.

The Data Center provides active server and application monitoring, network management, and automated backup capabilities, and is equipped with optimal environmental controls, including sophisticated air conditioning and humidifier equipment, as well as a optimal physical security system.

### **Off-Site Data Storage Vault**

In addition to collocation for computer systems, the Caribe.Net Data Center features a fire-proof vault for storage of electronic data and backups off-site. Collocation clients which choose backup service will have their data safely stored in the vault.

### **World Class Network Operation and Support**

Caribe.Net's Network Operations Center monitors our network 24 hours a day, 7 days a week. Our Customer Support Group provides telephone and email consultation during business hours to help solve problems or improve network performance.

### **Caribe.Net Collocation Features:**

- Hardened, secure Internet Data Center
- Redundant, high speed core Caribe.Net network connections
- Facilities strategically located within US territory but outside of mainland
- 24x7 network connection monitoring
- 24x7 secure, escort-required facility access
- Ethernet-switched (not shared) direct Internet access
- Air-conditioned and humidity controlled environment
- Primary/Secondary DNS service
- Customer Domain Registration
- UPS and diesel generator building backup power
- No extra fees for data transfer throughput or traffic
- Off-load bandwidth requirements from current Internet connection
- Off-net remote access through ISDN or analog dialup access is optional
